Trading on dYdX

Trading products offered

Written by Everett Hu

Updated over a week ago

There are three trading offerings on dYdX: **Perpetuals**, **Margin**, and **Spot**.

To trade on dYdX, users must first deposit funds into their relevant account. On dYdX, you have your Perpetual account, Margin account, and then a Spot account. We currently offer cross-margining across your Perpetual account. Offering portfolio margining across all products is something the team will be looking into in the future.

Perpetuals on Layer 2

dYdX offers Perpetual Contract Markets that allow up to 25x leverage on synthetic assets with no expiry. dYdX offers perpetual markets for BTC-USD, ETH-USD, and LINK-USD and will be adding more markets in the future.

For a complete list of supported pairs, please visit:

<https://help.dydx.exchange/en/articles/4800587-perpetual-contract-specs>

All Perpetual markets are listed on the **Perpetuals** product.

Margin on Layer 1

dYdX offers margin trading on ETH-DAI, ETH-USDC and DAI-USDC with up to 5x leverage. Margin trading can be accessed on the **Margin** product, where you choose either the '**Isolated**' or '**Cross**' mode on the trading sidebar. Here is a great place to start if you're getting started.

Spot on Layer 1

dYdX offers three spot markets: ETH-DAI, ETH-USDC and DAI-USDC. Once on the **Spot** tab on the **Margin** product, you can trade freely using market, limit, and stop orders.
